

Benefits for using the *Miracle* Stainless Steel Cover Track solution for sliding door track repairs.

The new 22, 28 and 31 range of the *Miracle* Stainless Steel Cover Tracks are the worlds most advanced method for fixing damaged sliding door tracks. The *Miracle* track system offers a permanent lifetime solution for the lowest cost.

#### What are the benefits?

##### #1. Pick a perfect match for a perfect roll.

The top radius has been designed to match different roller sizes. The 2.2mm radius and the 2.9mm radius are both available in different height tracks. Track width between legs range from 3mm, 5.8mm and 6.8mm.

##### #2. Easy to fit and a permanent solution.

Simply measure the length required and cut using a hacksaw with a fine blade. Test fit over damaged track before fixing permanently.

**#3. No track damage is too bad for a *Miracle* Cover Track to fix.**

No matter how damaged your track is the *Miracle* Stainless Steel Cover Track once fitted will make your door run like new.

**#4. No screws are required to fit a *Miracle* Cover Track and no worry about galvanic corrosion problems.**

Miracle Cover Tracks are fixed with a polyester resin filler which fill all damaged areas and a film of resin keeps the two different metals apart to assure there can be no galvanic corrosion. The end result is a sleek and clean looking track ready to serve a lifetime. It takes less time to fit than trying to drill and screw.

**#5. Clean up is very quick and simple.**

Once resin filler has gel set, use a flat screwdriver blade to run along both sides to clean out excess filler product. This is a quick and clean process. Use a vacuum to suck out loose material and job is done. The cover track will look like it was there all along.
